

PrimeWorksNet

PrimeWorks network version for multiple users
Technical Note IXD-610-TN Issue 3

PrimeWorksNet is the network version of the single user **PrimeWorks** PC data management software. Use with all **Primayer** data logging devices.

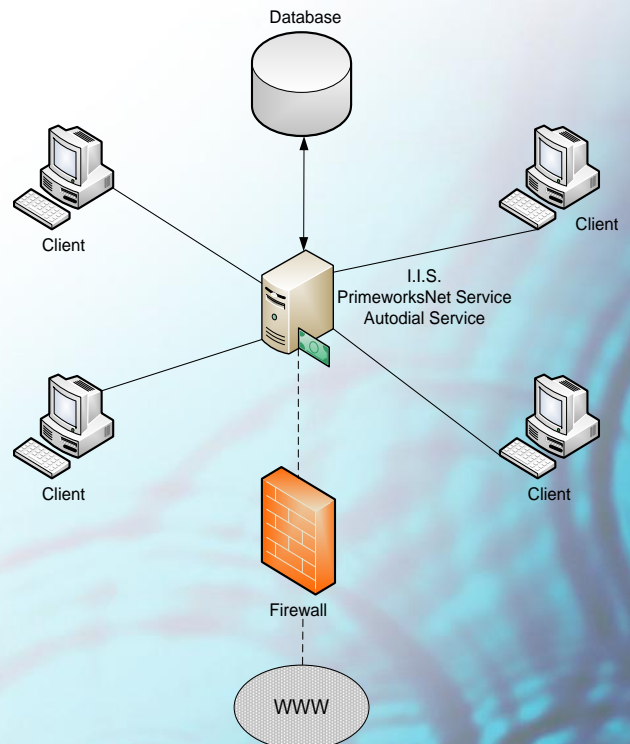

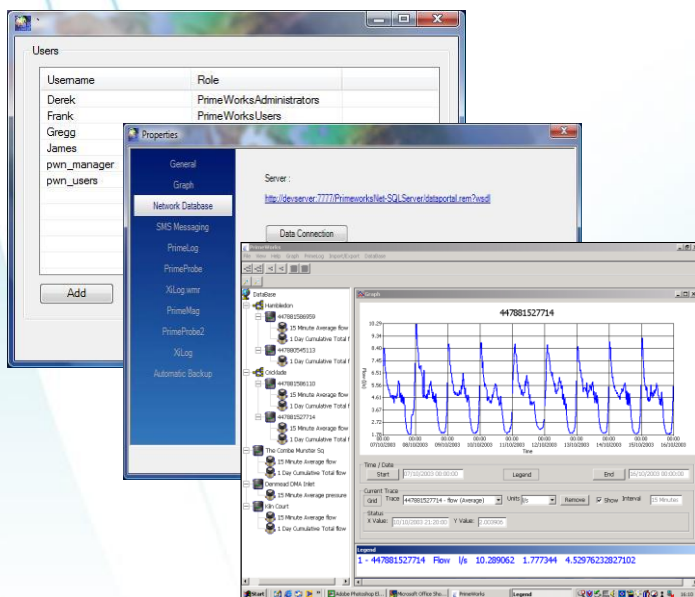

- Central database for logger data
- Multiple users – simultaneous data access
- **SQL Server** or **Oracle** database engines
- Use on Local Area and Wide Area Networks
- Interfaces with corporate systems
- Three access levels controls data availability – user, manager, system administrator

Supply

PrimeWorksNet is supplied as a software package together with installation and support. Implementation requires a site visit by a **Primayer** engineer to assess the host network, installation and commissioning requirements. The application runs on as many PC's as required. **PrimeWorksNet** has completed extensive trials by a number of major UK water companies.

Features

- Extensive database control
- Comprehensive graphing and reporting
- Auto-export of data
- Statistical information functions
- All standard **PrimeWorks** features
